FOR IMMEDIATE RELEASE

MORE THAN TWO SIDES TO EVERY STORY...
INTRODUCING A DOUBLE SIDED ACID-ETCHED GLASS VELOUR FINISH

Montreal, February 14, 2011 – Walker Glass is launching its double sided acid-etched glass Velour finish product.

The current double sided acid-etched glass program includes the Satin/Satin and the Opaque/Opaque finishes. With the new addition of Velour/Velour Walker is now able to offer no less than 6 different shades of full surface etching. As in the past, on special request, the double sided can be made out of a combination of full sheet etching on one side and an acid-etch pattern on the other.

“The growth in usage of double-sided etching has been phenomenal. A lot of our clients stock Velour and have been anxious to add this new offering. It will facilitate their inventory management” says Ross Christie, V-P Sales & Marketing.

Using North American glass substrates, the **Walker Textures** products are available in a wide range of thicknesses and colours varying from 3mm to 19mm, in sizes up to 100”x144”. Some products are offered in quantities less than 4,000 pounds. Visit our website at <http://www.walkerglass.com>

Walker Glass Co. Ltd. is a dynamic market-driven enterprise with over 65 years of experience in the glass and mirror industry in North America. Innovation and creativity is at the heart of its development. In 2002, the company launched a full surface acid-etched glass and mirror product line under the **Walker Textures™** brand name. Since then, the company has added a line of custom and stock patterns called **Walker Textures™ Nuance**.
